

Congratulations on purchasing your new VisionLINE outdoor firepit. Before lighting, please take the time to read these instructions to ensure correct operation and maintenance.

- \* These instructions to be used as guidance, please check with your local council in regards to open air burning solid fuel appliances
- \* Never use this product on a day of Total Fire Ban
- \* Only use product outdoors
- \* Unauthorized modification of the appliance will void warranty and is a fire risk

### **Lighting & Operation Instructions**

#### ***Setting up***

1. Choose the location for your firepit, making sure you take note of the surroundings such as, but not limited to; Overhanging trees, structures or power lines. Go to your local fire authority's website to view local regulations on clearances required from structures
2. Situate the fire pit on a non-combustible surface – **the underside of the fire pit can reach temperatures above 150oC**
3. Access to a fire extinguisher or water supply nearby is advised

#### ***Lighting the fire***

1. Using dry kindling in a criss cross pattern, light one or two fire lighters under, do not use petrol or any liquid accelerant to start the fire as this is extremely dangerous and can damage the firepit.
2. Once the kindling fire is established, add one to two pieces of hardwood
3. Keep adding wood as desired ensuring the fuel is kept below the secondary air holes located below the fires top lip. This ensures minimal smoke

#### ***Extinguishing the fire***

1. Allow the fire to burn down as much as possible to the point of no flames before using the lid to cover fire.
2. It is not recommended to use water to extinguish the fire

#### ***Cleaning and maintenance***

Your VisionLINE fire pit is a ultra-efficient burner. If you are using relatively dry wood, there will be very little ash left in the fire pit after use. If you wish to empty the ashes, turn the fireplace upside down and empty – you can use an ash vac if required.

The outside of the fire pit can be cleaned with a damp rag if required.

***As the product is made from stainless steel, it will naturally tarnish over time and "bronze" with the heat of the fire – this is normal***

#### ***Storage when not in use***

Although the fire pit is constructed from 304 stainless steel, it is recommended not to leave the product in the elements when not in use.
